# iEnvision...facilitating information flow and access between Med Affairs functions

**I am a publications planner, using  
Datavision as a standalone solution**

**What information would assist in the efficient  
development and optimization of my publication plans?**

Which pubs are being cited and where?

Which pubs are being used internally?

Which pubs are getting attention?

What is my current process for getting this information?

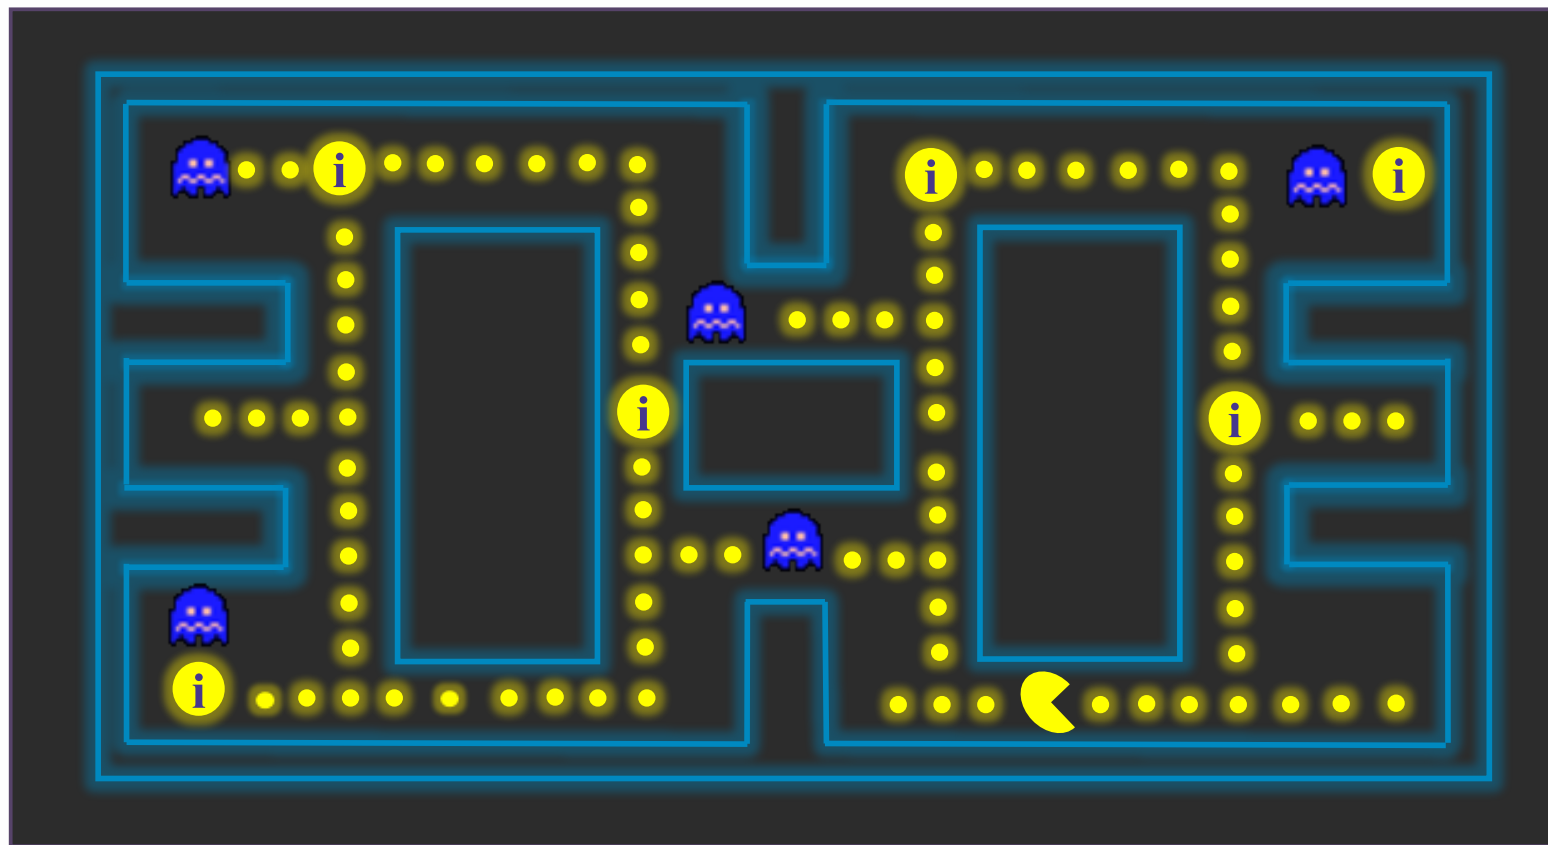

What HEOR studies are planned?

What questions are physicians asking?

What gaps could be filled with IIT data?

Processes vary across companies, various locations and gatekeepers involved

Which pubs  
are being cited  
and where?

Which  
pubs are  
being used  
internally?

Which pubs  
are getting  
attention?

How will the iEnvision integrated ecosystem  
of solutions facilitate information access and flow  
between Med Affairs functions?

# In summary iEnvision allows you to answer and act on three questions

---

## PLAN

- What information is available to inform my decisions?
  - driven by rule- and role-based access

## ACT

- What do I need to do?
  - in relation to my assigned projects and tasks
  - e.g. approvals, reviews, decisions

## MONITOR

- What is going on in 'my world'?
  - i.e. my area(s) of responsibility or interest
  - e.g. view metrics, status summaries, latest information

# THANK YOU
